

Simulation and Data Needs to Support Disaster Recovery Planning

Greg Deierlein
SimCenter Co-Director
Stanford University

Acknowledgments

Planning Committee: Adam Zsarnoczay (chair), Greg Deierlein, Ann-Margaret Esnard, Tracy Kijewski-Correa, Laura Lowes, Frank McKenna, Matt Schoettler

Advisers: Laurie Johnson, Scott Miles, Paolo Gardoni, Henry Burton

SimCenter Staff: Corinna Fong, Grace Kang

Session Moderators: Jack Baker, Rachel Davidson, Tim Cockerill

Recorders: Bingyu, Caroline, Ioanna, Maryia, Omar, Pablo, Preetish

Financial Support: *National Science Foundation*

Workshop Goals

- **Identify approaches and tools to evaluate the impact of natural hazards** and inform strategies to manage risks through mitigation and planning for disaster recovery
- **Collect and prioritize questions and concerns** about mitigating the devastating effects of earthquakes, storms and other extreme events that can be evaluated through scenario studies that can be facilitated using advanced simulations
- **Identify and prioritize the needs for improved models and supporting data** that can be integrated into computational workflows for advanced simulation of natural disaster impacts
- **Brainstorm strategies** to facilitate development and migration of simulation technologies into research and practice on disaster risk management and recovery through multi-disciplinary testbeds and other mechanisms.

Simulation-Based Engineering & Science

Modeling and simulation will expand our ability to cope with problems that have been too complex for traditional methods. Such problems, for example, are those involving multiple scales of length and time, multiple physical processes, and unknown levels of uncertainties.

“Digital City”: The concepts and methods of SBES promise to revolutionize the practice of urban planning, transportation, structural and environmental engineering, and municipal and environmental management.

The Tyranny of Scales: Formidable obstacles remain in linking highly disparate length and time scales and in bringing together the disciplines involved in researching simulation methods. Fundamental discoveries will be needed to surmount these obstacles.

Simulation-Based Engineering & Science

NATURAL HAZARDS ENGINEERING RESEARCH INFRASTRUCTURE

FIVE-YEAR SCIENCE PLAN

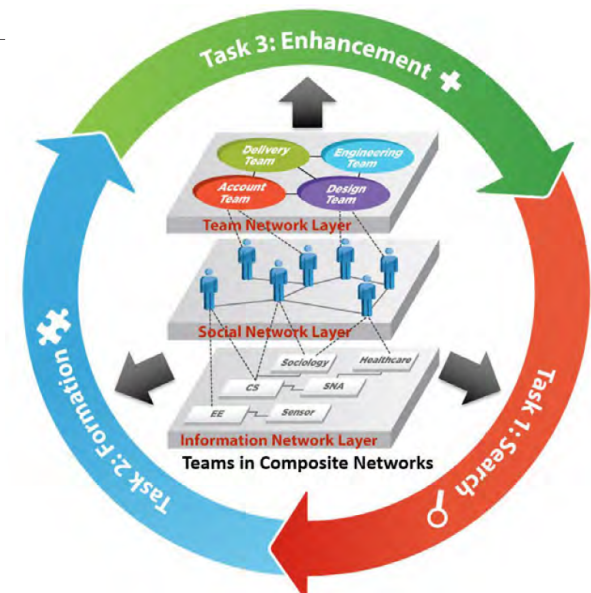

MULTI-HAZARD RESEARCH TO MAKE A MORE RESILIENT WORLD

SECOND EDITION
JANUARY 2020

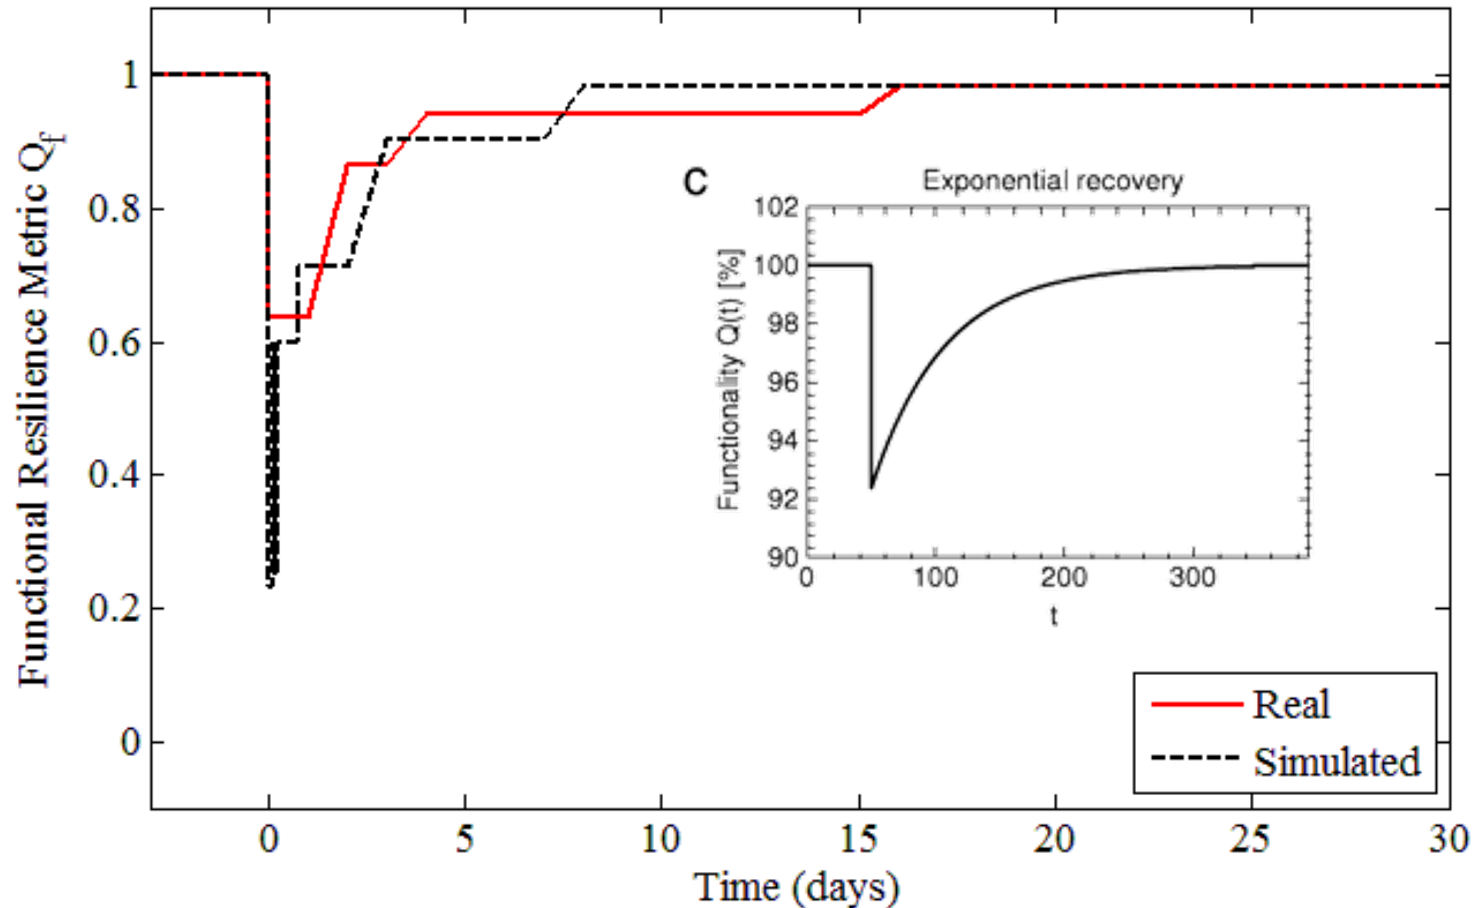

Three Grand Challenges

1. Identify and quantify the characteristics of earthquake, windstorm, and associated hazards—including tsunamis, storm surge, and waves—that are damaging to civil infrastructure and disruptive to communities.
2. Assess the physical vulnerability of civil infrastructure and the social vulnerability of populations in communities exposed to earthquakes, windstorms, and associated hazards.
3. Create the technologies and engineering tools to design, construct, retrofit, and operate a multi-hazard resilient and sustainable infrastructure for the nation.

Resilience to Natural Disasters

TARGET STATES OF RECOVERY FOR SAN FRANCISCO'S BUILDING AND INFRASTRUCTURE

INFRASTRUCTURE CLUSTER FACILITIES	Event Occurs	Phase 1 Hours			Phase 2 Days		Phase 3 Months		
		4	24	72	30	60	4	36	36+
CRITICAL RESPONSE FACILITIES AND SUPPORT SYSTEMS									
Hospitals								X	
Police and fire stations			X						
Emergency operations center	X								
Related utilities						X			
Roads and ports for emergency				X					
CalTrain for emergency traffic					X				
Airport for emergency traffic				X					
EMERGENCY HOUSING AND SUPPORT SYSTEMS									

95% residence shelter-in-place								X	
Emergency Responder Housing			X						
Public shelters									
90% Related utilities									
90% roads, port facilities, and public transit									
90% Muni and BART capacity									
HOUSING AND NEIGHBORHOOD INFRASTRUCTURE									
Essential city service facilities									
Schools									
Medical provider offices									
90% neighborhood retail services									
95% of all utilities									
90% roads and highways									
90% transit									
90% railroads									
Airport for commercial traffic					X				
95% transit									
COMMUNITY RECOVERY									
All residences repaired, replaced or relocated									
95% neighborhood retail businesses open									
50% offices and workplaces open									
Non-emergency city service facilities									
All businesses open									X
100% utilities									X
100% highway and roads									X
100% transit									X

Agenda

THURSDAY - JANUARY 30

9:00 am **Welcome, SimCenter Overview, and Workshop Goals**

SESSION I REGIONAL SIMULATIONS

9:30 am **Application Frameworks for Regional Simulation**

Gregory Deierlein, Paolo Gardoni

10:15 am **Breakout sessions**

simulation tools, attributes, gaps and capabilities

11:45 am Short break

12:00 pm **Discuss observations**

12:30 pm Lunch

SESSION II CONNECTING ACROSS EXPERTISE

1:30 pm **Issues in Disaster Simulation for Recovery Planning**

Laurie Johnson

2:00 pm **Breakout sessions**

Collect questions to be addressed by simulations

3:00 pm Short break

3:15 pm **Discuss observations**

3:45 pm **Breakout sessions**

Prioritize development opportunities

4:45 pm **Discuss observations**

5:15 pm Workshop adjourns, informal reception

6:00 pm Closure for the day

FRIDAY - JANUARY 31

9:00 am **Brief recap of day 1**

SESSION III DATA SOURCES

9:30 am **Data needs and sources**

Tracy Kijewski-Correa, Charles Vardeman

10:00 am **Breakout sessions**

Identify uses, needs and sources data

11:30 am Short break

11:45 am **Discuss observations**

12:15 pm Lunch, group picture

SESSION IV INTERDISCIPLINARY ENGAGEMENT

1:15 pm **Engagement through benchmarking testbeds**

Scott Miles, Paolo Gardoni, Rachel Davidson, Youngjun Choe

2:00 pm **Breakout sessions**

Develop strategies for sharing and vetting of methods

3:30 pm Short break

3:45 pm **Discuss observations**

4:15 pm **General discussion, closing remarks**

4:30 pm Workshop adjourns
